

Join us on **October 9-10, 2026** for the Cranio Research Congress at the University of Antwerp, Belgium, with the option to attend online. Across two days of scientific presentations, clinical insights, and experiential workshops, we explore **how craniosacral work can enhance sensory integration and awaken deeper awareness of our senses in subtle and powerful ways**. You will discover how Craniosacral Therapy can enrich sensory experience, support self-regulation, and foster wellbeing. You will also explore how sensory awareness itself may guide and deepen the therapeutic process.

The 2026 speaker line-up brings together experienced practitioners and pioneering voices, including:

- **Lizette Villaverde** on scarwork and sensory integration
- **Lin Vermeiren** on Continuum and sensory intelligence
- **Dr. Michael Shea** on interoception and embodied metabolism
- **Silvia Sédóc** on the senses as gateways in cranio work
- **Dr. Therese Rowley** on multisensory intelligence and neurodiversity
- **Hugh Milne** on how medical intuition works
- **Dr. Cherionna Menzam-Sills** on primordial sensing and embryological intelligence
- **Joke Langmans** on sensory awareness in clinical craniosacral practice
- **Sevastian Koutroumpanou** on CST research and clinical depth
- **Cornelia Elbrecht** on a sensorimotor art therapy approach
- **Joachim Aarts** on sensory perception from traditional healing practice

Whether you are a craniosacral therapist, healthcare professional, researcher, or on a path of personal growth, you will leave with practical techniques and fresh perspectives to deepen your work.

All presentations will be held in English, with **live translated subtitles available onsite and online in German, French, and other languages**, making it easier for your members to fully follow and enjoy the congress.
